

Future (International) Internet Research

Darleen Fisher

dfisher@nsf.gov

SwitchOn Workshop

January 8, 2015

Outline of Talk

- Future Internet Architectures (FIA)– a Case Study
- Hitting the Trends
- Leveraging the Enablers
 - Technologies
 - Research Infrastructures
- Exploring the Environment(s)
- Finding the Confluences
- Making it Matter
- FIA – Reprise

Future Internet Architectures

- NSF's Perspective—Challenge to research community to design a secure full-functioning Internet that meets the needs of the 21st century
 - Bold architecture research
 - Fostering innovative systems research
 - 10 Year Endeavor—Three Phases
 - Components (FIND)
 - Architectures (FIA)
 - Systems building and application to environments (FIA-NP)
- Deep Understanding of Current Internet and Design Tradeoffs
- Network Designs with Full “Internet” Functionality
- Research Community Focusing on Innovative, Big Systems/Architecture Design & Implementation
- Integration of Big Systems and Security
- Collateral Innovative research ideas

Future Internet Architectures

- MobilityFirst
- Named Data Network (NDN)
- NEBULA
- eXpressive Internet Architecture (XIA)

MobilityFirst

RUTGERS

(LEAD)

D. Raychaudhuri, W. Trappe,
R. Martin, Y. Zhang, I. Seskar Venkataramani, (J. Kurose), P. Shenoy

MobilityFirst Concepts: Architecture Summary

Named Data Networking Team

UCLA

Jeff Burke
Van Jacobson (architect)
Lixia Zhang

Beichuan Zhang

Tarek Abdelzaher

Christos Papadopoulos

Lan Wang

UCSD

Kim Claffy

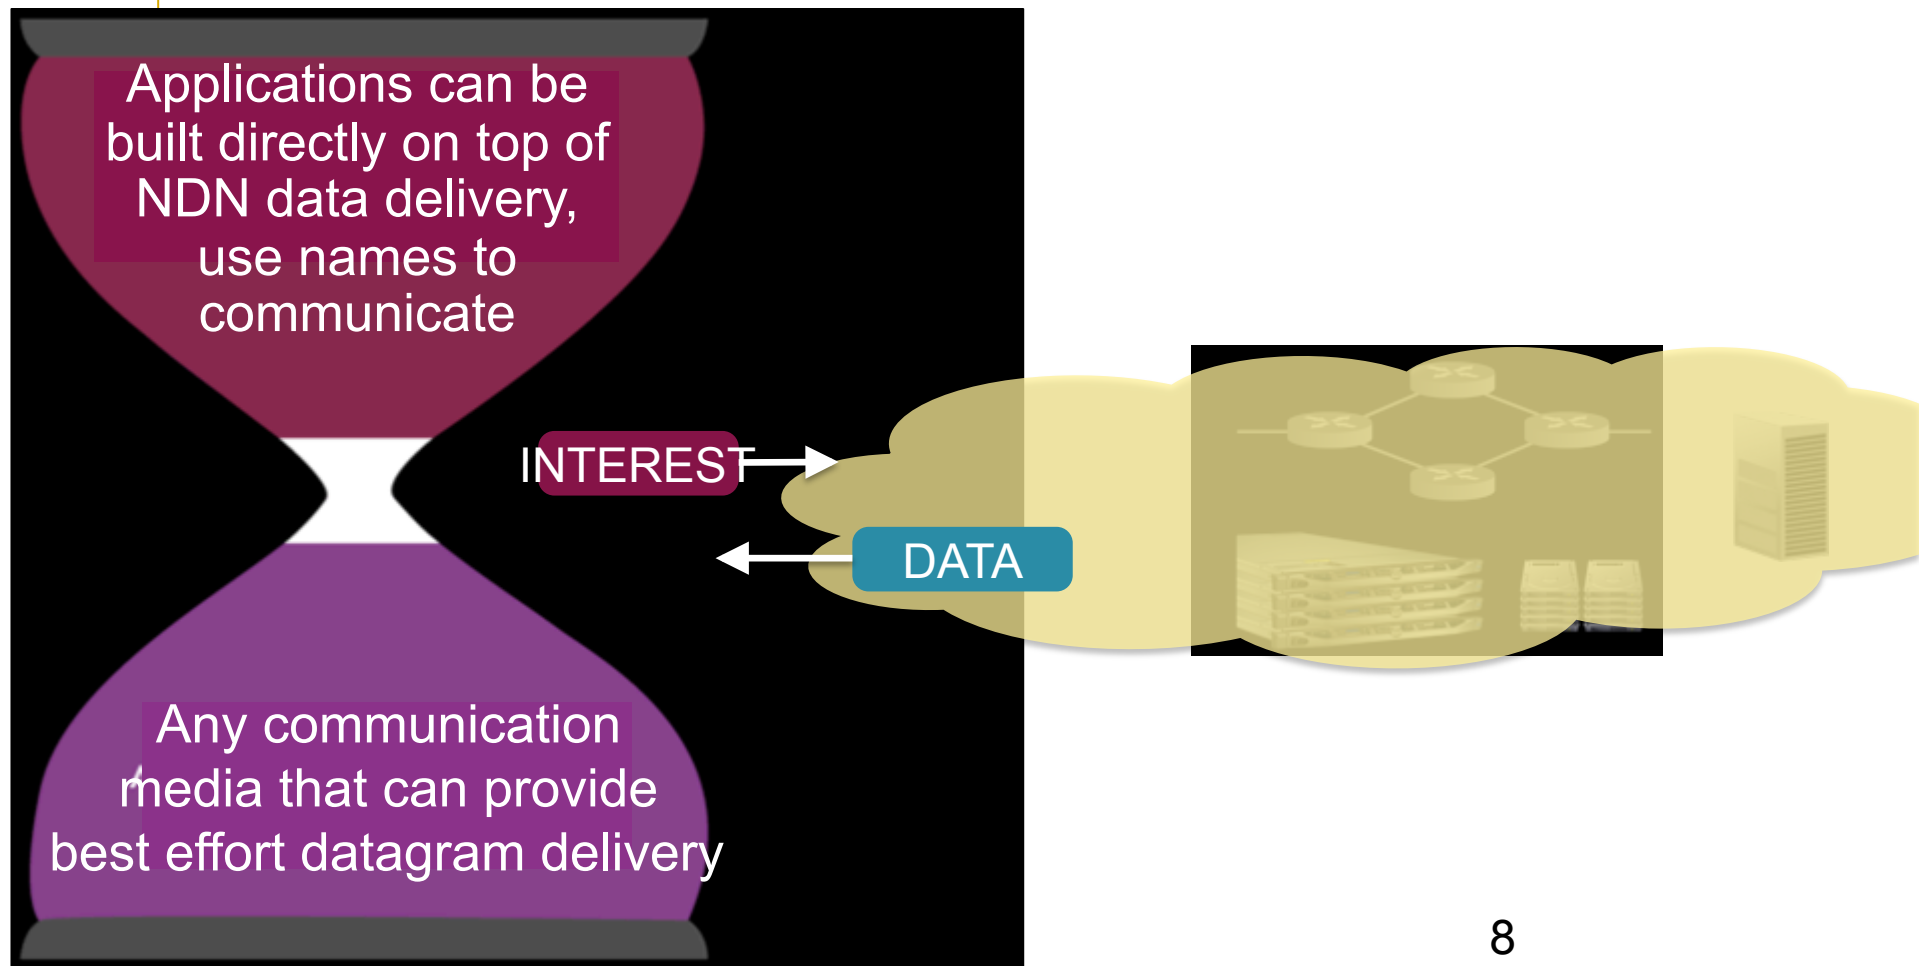

Alex Halderman

Patrick Crowley

The Basic NDN Architecture Concept

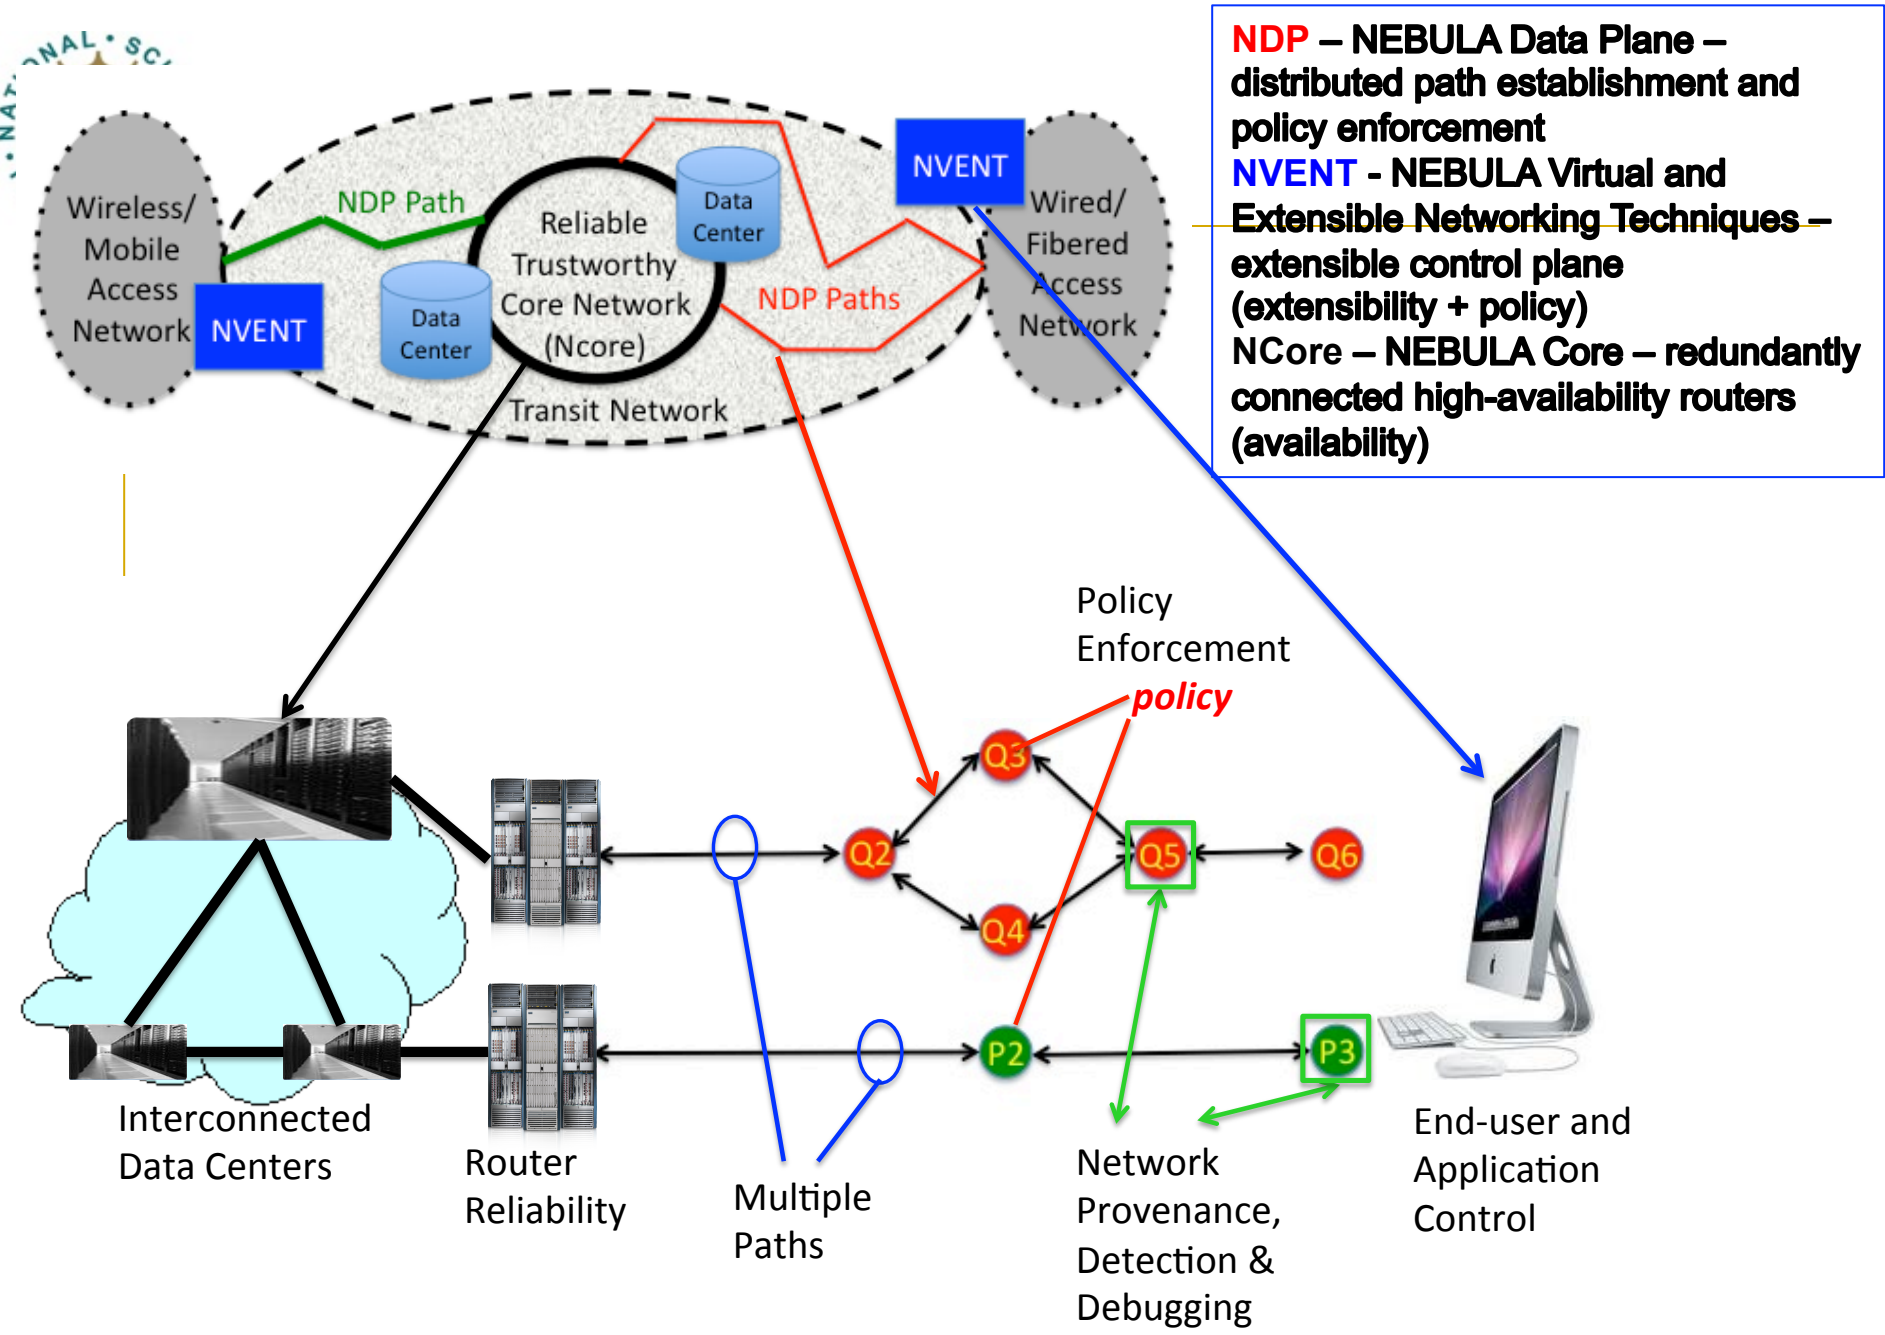

NEBULA Future Internet

Cornell University

The eXpressive Internet Architecture

Peter Steenkiste, David Andersen,
David Eckhardt, Sara Kiesler,
Jon Peha, Adrian Perrig, Vyas Sekar,
Srini Seshan, Marvin Sirbu, Hui Zhang
Carnegie Mellon University

Aditya Akella, University of Wisconsin

John Byers, Boston University

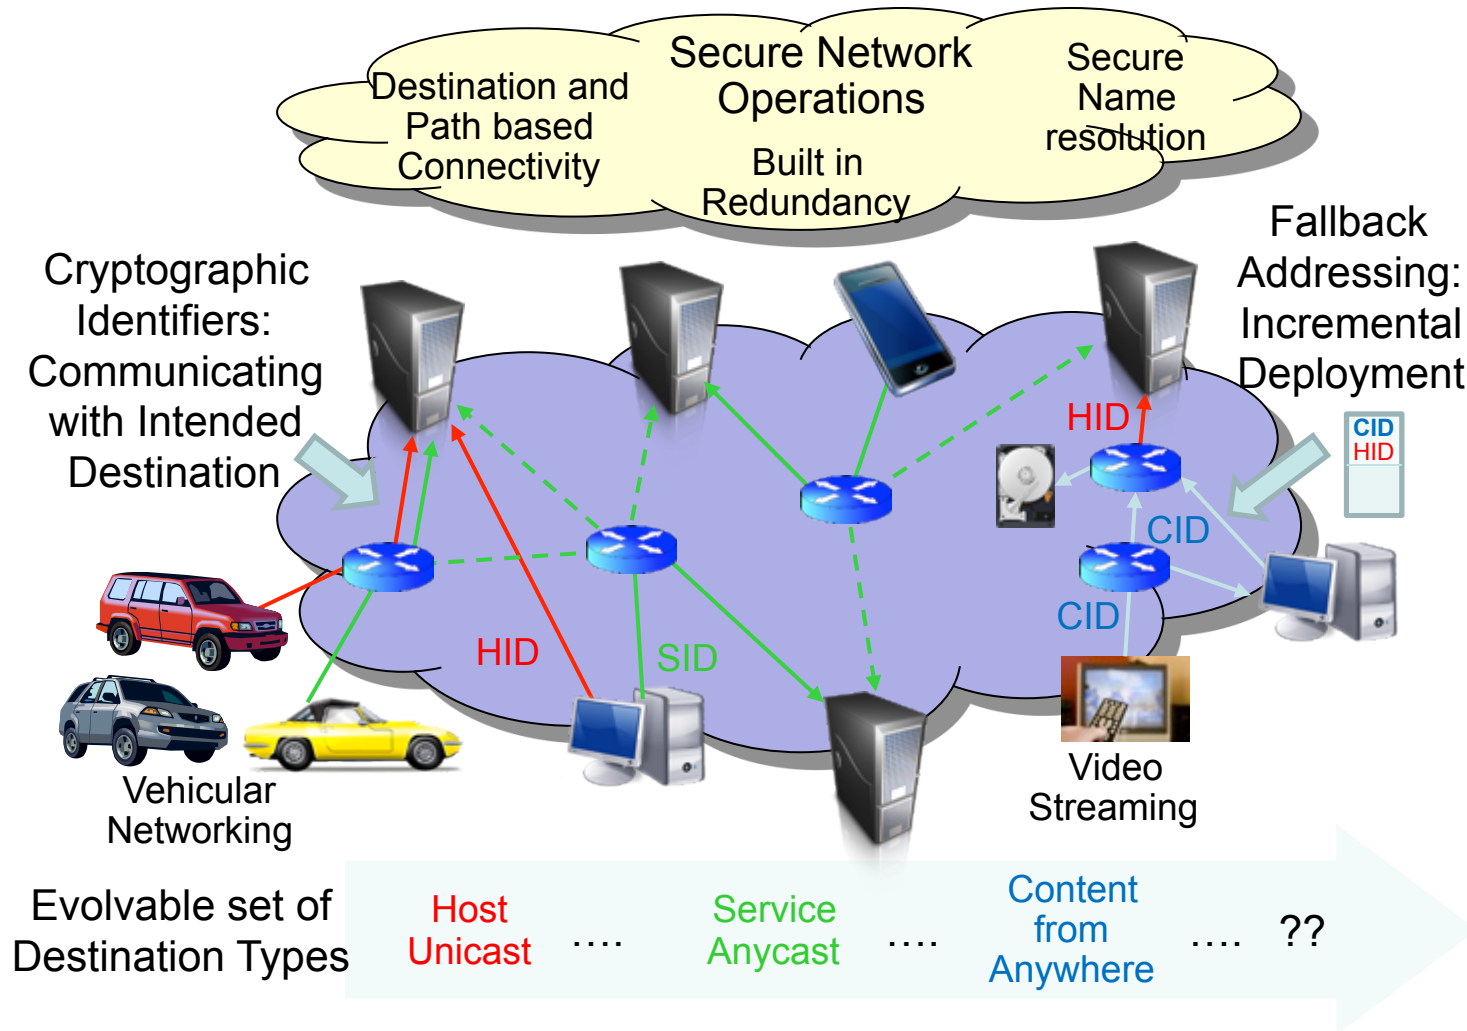

Bruce Maggs, Duke University

XIA Overview

Finding Exciting Research Ideas

- Hitting the Trends
- Leveraging the Enablers
- Exploring the Environments
- Inviting Confluences
- Understanding the Problem
- Formulating a Potential Approach

Hitting the Trends—Some Examples

- How is the Internet Changing? Where are the (New) Open Questions?
 - Explosion in Mobile Users and Networks
 - Increasing Priority of Content
 - Rise of Video Streaming (traffic different from web traffic) and Demand for Quality of Experience (QoE) Everywhere
 - Development & Deployment of Cyber-Physical Systems with Sensor and Actuators in Realtime
 - Future of Internet of Things (IoT)
 - Changing Structure of the Internet
 - Content Delivery Networks (CDNs) -- Caching and Data Centers
 - Internet Exchange (Ixes) & Software Defined Interconnects– Flattening of the Internet
 - Rise of clouds, cloud services,
 - Integration of clouds and networks (e.g. (mobile) wireless at the edge--clouds in the middle)
 - Increasing Virtualization and Federation
 - Potential Balkanization of Networks

Hitting the Trends (cont.)

- Merger of Big Data + High Performance Computing + High Capacity Networks (e.g. Data Analytics)
- What are the Challenging Environments?
 - Critical Infrastructures (Power Grid, Airline Control systems, etc.)
 - (Researchers need access and real knowledge of the systems to work in this area)
 - Life-critical Cyber-Physical Systems (CPSs)
 - Underwater Networking
 - Networks for Drones
- What are Social Trends and What is their Potential Network Impacts?
 - Rise of On-line Social Networks, On-line Advertising, Crowd Sourcing, and Proliferation of Apps
 - Hacking and Nation State-Level Attacks
 - Loss of and Desire for Privacy; Rise of e-bullying; Potential Tracking /Stalking

Leveraging the Enablers

What New Research Questions and Opportunities Opened by:

■ Technologies, Software, and Resources such as:

- OpenFlow
- SDN Switches
- Optical Devices (e.g. integrated photonic circuits)
- Network Functions Virtualization (NFV)
- IaaS, PaaS, SaaS, XaaS
- OpenStack
- Unlicensed Spectrum
- Full-Duplex Massive MIMO
- Pico Cells
- Data
- Others

→ What New Technologies are Needed?

■ Research Infrastructures such as:

- GENI, ORBIT, NSFCloud, Brazil's FIBRE, EU's (FIRE/Fed4FIRE) & Grid 5000, PlanetLab, ViCCi, ViNi, Emulab, Internet2, etc.
 - Virtualized and Federated

Exploring the Environments—What are the Unique Challenges Here?

Examples:

- Body-Area Networks (Intra-body medical devices; wearables)
- Machine to Machine (M2M) networks
- Home Networks
- Crowds
- Business to Business (B2B) Networks
- Vehicular Networks
- Enterprise Networks
- Data Centers + High Performance Computing
- Clouds
- (Real-time) CPSs (Smart Grid Smart Health, etc.)
- Social On-Line Networks with Privacy Protection
- Video Delivery Systems

Finding the Confluences

- Review George Varghese's 2014 SIGCOMM Keynote Slides!
 - Networking and Algorithms
 - Queuing and Networking
 - Economics and Networking
 - Networking and Virtualization

- Apply his ideas and cautions to open questions you see
 - Multiple fields and areas of expertise
 - US-Brazil Perspectives and Strengths

Exploring a Research Problem

- What is an open or new problem that if solved would make a significant difference?
- Can you conceive of a new approach to solve the problem? How would you get preliminary results that indicate potential success?
- Do you and your collaborators have the required expertise to do the work? If not who else do you need?
- How does your proposed work fit in with what has been done? Why/how is it more promising than others' work?
- How will you and others know that your completed work is successful? Can you conceive of an evaluation plan?
- Is the overall project “right-sized” for the problem/funding / project duration/PI + students involved?

FIA--Reprise

- Trends– Mobility, Data/Content, Cloud as 24/7 Utility, Extensibility, Future Proofing
- Infrastructures—GENI, Orbit, Overlays, Special Purpose Equipment and Testbeds
- Technologies– SDN, DAGs, Serval, etc.
- Environments– Vehicular, Smart Buildings, Smart Health, Internet of Things (IoT), Video Services w/ QoE, Mobile Data Services Trial with a Wireless ISP, CDN Trial with PBS stations, Context-aware Public Service Weather Emergency Notification System
- Confluence – Built-in Security

FIA projects asked and wrestled with (and you should too):

- What are the current and future big challenges?
 - Consider trends, technologies, requirements, etc.
- How to think outside the box, but not out in left field?
 - Be innovative, but also understand dissertation-size chunks, publication environments, and feasibility of use
- How to choose collaborations wisely?
 - Compatible Colleagues
 - Compatible Expertise
 - Team—only as big as the problem requires

Thank you.
